DRICIAN FRANCIS D. CORDON

Information Technology Student

ABOUT ME

Information Technology student with experience in technical support, data encoding, documentation and Excel dashboards. Contributed to backend development, databases and testing for academic software projects.

EXPERIENCE

On the Job Training

July 2026–Present

- Assist employees with basic software and network troubleshooting, and encode data into the company's internal system.
- Support documentation and create Excel dashboards to help employees monitor progress more quickly and improve workflow efficiency.

Encoder | GreenLight Power Inc.

February 2026–Present

- Encode and update company records using QuickBooks and digital databases; assist with bank reconciliation.
- Verify transactions against source documents, resolve mismatched records and organize physical and digital documentation.

SELECTED PROJECTS

BlockGO Blockchain Grading System

A blockchain-based grade records management system that supports faculty grade encoding, chairperson review and approval, registrar processing, and student grade viewing. The system brings these academic workflows together to improve record tracking and the integrity of grade information. Contributed to the project through backend development assistance and system testing.

Digital Survey System

A web application for creating and managing surveys, collecting respondent submissions, and reviewing results through dashboards and analytics. It helps organize survey information so users can monitor responses and interpret findings in one place. Assisted in developing the backend and database components that support survey and response management.

Faculty In and Out Monitoring System

An attendance monitoring application that records faculty arrival and departure and helps organize attendance information for review. It supports tracking attendance records and makes them easier to retrieve and monitor. Assisted in developing the system's attendance monitoring features.
